

*"We found I-Cubed to be a technically capable team that was willing to make an extra effort to help us meet our data migration challenges. Where issues arose, I-Cubed responded both quickly and professionally."*

*- Lars Örnholmer, Electrolux R&D Manager Washers*

## **Electrolux Laundry Systems maintains integrity of its critical engineering data by using Legend for PDMLink**

**The Challenge:**  
Migrate 3,500 SolidWorks files from file system and 10,000 CADD5 part files from Optegra into PDMLink 8.0.

**The Solution:**  
Electrolux Laundry Systems implements Legend for PDMLink to migrate engineering data into PDMLink 8.0.

**The Result:**  
Electrolux Laundry Systems maintains integrity of its critical engineering data by taking advantage of Legend for PDMLink.

Electrolux Laundry Systems is a leading supplier of professional laundry solutions worldwide. Electrolux Laundry Systems is part of the Electrolux Group, the world's largest producer of powered appliances for kitchen, cleaning, and outdoor use. The company has approximately 1500 employees located at three manufacturing entities in Sweden, France, and Thailand. It also has 23 national sales companies around the world.

Over the years I-Cubed has proved to be a trusted partner of PTC by supporting PTC sales, services and development organizations. Therefore, when PTC customer, Electrolux Laundry Systems, needed a solution that would facilitate the company's PLM initiative, Windchill PDMLink, and improve engineering data sharing processes, PTC recommended I-Cubed as a reliable provider of CAD data migration solutions.

In order to take full advantage of Windchill PDMLink, Electrolux used Legend for PDMLink to migrate SolidWorks models and miscellaneous files into Windchill PDMLink. Additionally, Electrolux benefited from I-Cubed's customization and training in the use of Legend to move CADD5 models from Optegra into PDMLink.

I-Cubed technical consultants worked side by side with Electrolux Laundry Systems to define a specification for the required Legend for PDMLink solution.

The Legend consultants, along with the Electrolux migration team, developed a migration strategy that best met the requirements of the data migration. Additionally, I-Cubed consultants trained the Electrolux team on how to install, configure and use Legend.

After installation and configuration of Legend for PDMLink, the Electrolux migration team was able to load Solidworks files into PDMLink while maintaining integrity of the data.

To load CADD5 part files into PDMLink, I-Cubed provided customization to the Legend product. This customization included an adapter that gathered content files for each CADD5 part, enabling an upload of content files. Other attributes were set via existing Legend capabilities.

To maximize customer satisfaction and deliver quality results, I-Cubed, located in Raleigh, NC, partnered with Electrolux teams in Sweden and Denmark. I-Cubed technical representatives modified their working schedules to be able to provide timely and efficient technical support during the Electrolux teams' critical periods of migration. This proved crucial and resulted in technical support response time measured in hours instead of days.
